Asiemo Consulting: Pathway Towards Technology:

Optical Network Solutions

Asiemo Consulting provides the latest technology solutions in the optical networking space. We have a plethora of experience ranging from designing Dense Wave Division Multiplexing MANs to long haul point-to-point Gigabit Ethernet networks. With the continued growth in the optical space, any number of customized solutions can be designed and implemented to provide adequate speed and performance for your company.

Convergent Solutions

Rather than incurring charges for each voice or fax call made with traditional telephone technologies, we will create solutions that offer businesses the advantage of the flat rate pricing normally associated with Internet access.

Turnkey End-to-End Technical Solutions

Asiemo Consulting is a total end-to-end solutions company that provides small and medium sized businesses with customized turnkey network security solutions. These solutions are the combination of various firewall and/or data encryption techniques that aid in the protection of private infrastructures attached to the public Internet. Coupled with customized IP VPN solutions, our network security solutions create secure communication infrastructures for any size business.

Our core of professional consultants has a proven track record with:

Architectural Design

The heart of any computing environment is the network in which communication takes place. Companies beginning with a sound infrastructure can eliminate timely delays in database or file server data retrieval. Asiemo Consulting designs sound infrastructures using our vast expertise in Wide Area Network solutions such as Dense Wave Division Multiplexing (DWDM) Metropolitan Area Networks (MANs), Packet Over Sonet (POS) networks utilizing MPLS, ATM QoS solutions, and Frame Relay solutions. In addition, Asiemo Consulting designs Local Area Network (LAN) solutions enabling local computing systems to efficiently and effectively communicate.

Asiemo Consulting has designed several large-scale Virtual Private Network (VPN) solutions for companies looking to lower costs while optimizing operating efficiencies. Companies who wish to establish tele-working programs look towards IP VPN solutions to extend their private enterprise computing systems over the Internet in a secure manner.

Network Security

Protection of proprietary information is paramount to all companies interfacing their private networks with the Internet. The key question is then "How do we create a secure environment while utilizing the Internet?" Asiemo Consulting helps to answer this question through its proven and tested techniques in the area of data security. With our consultants being cross trained in network design, management, and security, not only are hardware and software mechanisms put in place to aid in creating a secure computing infrastructure, but a sound design is implemented from the inception, remedying the most likely network deficiencies.

IT Business Process Outsourcing

Companies are now outsourcing their Information Technology departments due to the limitations in budgets and lack of qualified expertise. Asiemo Consulting realizes that some small businesses lack the in-house expertise to handle the growing needs of information technology, or simply cannot afford the personnel to recruit the staff. Asiemo Consulting can attain the needed professionals to fill these voids.

We pay special attention to the necessities of the small business market. Asiemo Consulting concentrates on giving a small business the opportunity to center themselves on their business and allow the day-to-day IT operations to be serviced by an experienced and talented solutions team.

Our team of professional consultants are proficient in many areas of innovation. We extend our knowledge and expertise along to our customers. We will integrate your "new" technical solutions into your company's mission which speaks to the rest of the world. Asiemo Consulting's employed business solutions and services include:

- Technical Design and Carrier coordination for Broadband Cable Modem Internet Service Provider.
- Value Added Reseller Data and Voice solution
- Small Business Internet presence consultation
- DSL Product and Service Engineering and Testing for Competitive Local Exchange Carrier (CLEC)
- Network Security design and implementation (Software based firewalls, Hardware based firewalls, Virtual Private Network solutions)
- Metro point-to-point Data Storage solution
- Long and Short haul DWDM network solutions
- Streaming Media solutions

Diagnosis for Big Business

Asiemo Consulting is committed to providing preeminent service and the best products available in the current revolving marketplace. We strive to provide tomorrow's technology at today's pricing. Our focus is to help your business with the management of technology in an operable, compatible, and secure environment that allows you to compete in today's digital economy. As your requirements expand, Asiemo Consulting's proven strategies and methodologies will help ease your technology concerns.
